PROFESSIONAL SUMMARY

I am a dedicated Python developer with hands-on experience building scalable web applications using Flask and React. I have developed automation solutions with Selenium and worked extensively with SQL databases to design and manage data-driven applications. With a strong foundation in Data Structures and Algorithms (DSA), I focus on writing efficient, maintainable, and high-quality software that solves real-world problems.

EXPERIENCE

Backend Developer Sept 2024 - Jan 2025

Confidential Restaurant Client

- Designed and built a production-grade backend for a restaurant Point of Sale (POS) system using Python and PostgreSQL, enabling end-to-end order processing and financial operations.
- Developed core modules for inventory management, sales tracking, and automated receipt generation to improve operational efficiency.
- Integrated secure payment workflows and transaction reporting to support accurate reconciliation and reliable financial auditing.

Full Stack Intern Mar 2024 - Aug 2024

DakuGin Inc.

- I developed a responsive web platform using JavaScript, HTML, and CSS for a market-days application.
- I utilized version control systems to manage code changes effectively.
- I also contributed ideas towards improving the usability of the web application.

Backend Developer Dec 2025 - June 2026

Precious Cornerstone University

- Architected and developed a multi-portal student management system covering applicant onboarding, admissions workflows, course registration, and document management for a Nigerian private university.
- Designed and managed a cloud PostgreSQL database, implementing authentication separation patterns, reference data seeding, and connection pooling strategies to mitigate serverless cold-start latency issues.
- Integrated Interswitch/Quickteller payment gateway using a redirect-based flow, diagnosing and resolving a race condition that caused incorrect payment status updates, and implementing a recovery script with dry-run support for safe reconciliation.

- Implemented JWT-secured document upload services with server-side image processing and enhancement using Python and OpenCV.
- Configured transactional email delivery via Resend, implementing a DNS-agnostic workaround to bypass institutional domain restrictions.
- Deployed the system on a Hostinger VPS using Gunicorn and Nginx (with /e-portal routing), and managed process orchestration with PM2, establishing structured Git workflows across multiple deployment environments.
- Optimized backend performance by analyzing Flask/Werkzeug logs, identifying redundant API calls and CORS preflight overhead, and improving request flow efficiency on the applicant dashboard.

Full Stack Developer

Oct 2024 - Oct 2025

Freelance

- Developed RESTful APIs to enable seamless integration between frontend applications and backend services across client projects.
- Collaborated with frontend developers to deliver responsive, user-focused interfaces and improve overall application experience.
- Designed and implemented relational database solutions using MySQL, ensuring data consistency, scalability, and performance.
- Built and maintained efficient, reusable backend code to support multiple production features and client requirements.
- Created and optimized SQL scripts for data integrity, performance tuning, and reliable database operations.
- Developed custom middleware to handle cross-cutting concerns such as logging, error handling, authentication, and request validation, improving system reliability and maintainability.

EDUCATION

University of Ibadan, Ibadan

Feb 2018 - Jul 2023

B.A.

University of Ibadan, Ibadan

Sept 2024 - Present

M.A.

SKILLS

Python

Flask

FastAPI

React

JavaScript

PostgreSQL

MySQL

SQLAlchemy

Selenium

REST API Development

Git

HTML5

CSS3

Bootstrap

Database Design

Authentication & Authorization

Data Structures & Algorithms (DSA).
